In this volume,

Norquest presents a reconstruction of Proto-Hlai which includes chapters on Proto-Hlai initials and rimes, a comparison with Proto-Tai, and an examination of the aberrant Jiamao language.

PCMag.com is a leading authority on technology, delivering Labs-based, independent reviews of the latest products and services. Our expert industry analysis and practical solutions help you make better buying decisions and get more from technology. This fascinating new core textbook, authored by a highly respected academic with over a decade of industry experience, takes a

global and strategic approach to the important topic of operations management (OM). Integrating contemporary and traditional theories the text covers everything a student needs to understand the reality of operations in the modern world and combines the latest cutting-edge thinking with innovative learning features. Written in a concise and engaging style and based on up-to-date research in the field, the book provides a range of international case studies and examples that help students to apply theoretical knowledge to real-world practice. This is a must-have textbook for

students studying operations management modules on undergraduate, postgraduate and MBA programmes. In addition, this is an ideal textbook to accompany modules on operations strategy, production management and services management. Procurement can be your company's secret weapon for winning in turbulent times. In most companies, procurement is an unglamorous, unloved part of the business. A job in the procurement office? A fast track to nowhere. Sourcing and supplier management is strictly about costs, the thinking goes,

and all that matters is playing hardball to get these as low as possible. No connection to innovation or strategy or creating positive value. Not so fast. As Boston Consulting Group thought leaders Christian Schuh, Wolfgang Schnellbacher, Alenka Triplat, and Daniel Weise explain in *Profit from the Source*, procurement should be regarded in a new light, because it has the potential to be a CEO's secret weapon in these fast-moving, disruptive times. The authors offer a wake-up call and a new strategic blueprint for leaders everywhere. With vivid stories and in-depth case studies,

they illustrate that no other business function offers the same holistic view of a company—from suppliers who provide the organization with raw materials and components to consumers who buy the finished product. While it's true that a core task of any procurement function is to keep costs from spiraling out of control, the authors show how procurement can help businesses generate phenomenal value from five other sources of competitive advantage critical to success—innovation, quality, sustainability, speed, and risk reduction. Drawing

on BCG research and the authors' firsthand experience working with some of the world's leading companies—in high tech, automotive, consumer goods, and many other industries—*Profit from the Source* provides proven strategies to drive new bottom-line, as well as top-line, growth for your company. Thinking of taking up full-time residence on a boat? Dave Kelley, the former Executive Editor of Boating World

magazine, offers an instructive and enjoyable first-person account of onboard life, complete with photos. Aided by his wife, who provides a woman's perspective, and by his dogs and cat (who "address" a pet's concerns), Kelley discusses all the important considerations involved in opting for a home port. Find out how to choose the right boat, set up an office, adjust to the limited space, establish a routine, and prepare float plans. Prepare yourself for the costs and special challenges involved in marina life. Interviews with those who have lived at sea reveal why some have

returned to land- and why others will never become landlubbers again.

International trade and the rapidly proliferating network of trade agreements have aroused passions for decades. While some blame trade agreements for exporting jobs, sowing poverty, furthering illegal migration, and robbing national sovereignty, others praise them as lynchpins of growth, pillars of peace, guarantors of security, and engines of globalization. Still others view them as useful instruments for fostering global trade and investment. This book examines

whether trade agreements merit the blame levelled against them or the hopes pinned on them. It employs extensive new historical data on trade agreements to examine the features of the ongoing trade agreement wave; analyzes the future implications of trade agreements in the context of the multilateral trading system, world trade, and international politics; and puts forth novel policy proposals to make trade agreements a more constructive force in the global economy. Design for Sustainability is a practical approach to design which focuses on the challenges and issues faced by

those designing consumer products in the 21st Century. It is written from a design perspective and aimed at both professional and student industrial and product designers, and those involved in managing design. The book begins by summarising the historical and current issues of the environmental debate in the context of sustainable product development, highlighting the benefits gained from considering the impact on the environment and issues of sustainability when designing. The authors answer the questions: What is sustainable product development and why is it important?

What are the main drivers of sustainable product development? They explain how design can help to control human impact on the environment by not only minimising pollution, waste, energy use and use of scarce resources, but also by thinking outside the box to create systems and services that can reduce the number of products manufactured. The aim is to put sustainable development within a commercial context and introduce a new focus for design. *Design for Sustainability* outlines and assesses the methods, tools and techniques available to designers, both for

design innovation and design improvement. A wide range of case studies are presented across a number of product sectors including electrical goods, IT and furniture. Initially they demonstrate product improvement and redesign, examples include those that reduce waste, pollution and energy consumption, designing for recycling and reuse of parts. Further examples are then provided exemplifying the more radical approach of system and service design. The final section takes the reader through a whole sustainable design project from start

to finish, from brief to manufacture. References and sources of information are also included. Covers receipts and expenditures of appropriations and other funds. This book constitutes the refereed proceedings of the 8th International Conference on Data Warehousing and Knowledge Discovery, DaWak 2007, held in Regensburg, Germany, September 2007. Coverage includes ETL processing, multidimensional design, OLAP and multidimensional model, cubes processing, data warehouse applications, frequent itemsets, ontology-based mining, clustering,

association rules, miscellaneous applications, and classification. Provides information on wireless networking, covering such topics as 802.11 standards, hotspots, and setting up a wireless network. This volume brings together a selection of papers written by Patricia Werhane during the most recent quarter century. The book critically explicates the direction and development of

Werhane's thinking based on her erudite and eclectic sampling of orthodox philosophical theories. It starts out with an introductory chapter setting Werhane's work in the context of the development of Business Ethics theory and practice, along with an illustrative time line. Next, it discusses possible interpretations of the papers that have been divided across a range of themes, and examines Werhane's contribution to these thematic areas. Patricia H. Werhane is a renowned author and innovator at the intersection of philosophy and

Applied Business Ethics. She is professor emerita and a senior fellow at the Olsson Centre for Applied Ethics at Darden and was formerly the Ruffin Professor of Business Ethics. She is also professor emerita at DePaul University, where she was Wicklander Chair in Business Ethics and director of the Institute for Business and Professional Ethics. A prolific author whose works include *Moral Imagination and Management Decision-Making* and *Organization Ethics for Health Care*, Werhane is an acclaimed authority on employee rights in the workplace, one of the leading

scholars on Adam Smith and founder and former editor-in-chief of *Business Ethics Quarterly*, the leading journal of Business Ethics. She was a founding member and past president of the Society for Business Ethics and, in 2001, was elected to the executive committee of the Association for Practical and Professional Ethics. Before joining the Darden faculty in 1993, Werhane served on the faculty of Loyola University Chicago and was a Rockefeller Fellow at Dartmouth College and Senior Fellow at Cambridge University. In an era of human genome research, environmental

challenges, new reproductive technologies, and more, students can benefit from an introductory sociology text that is a biologically informed. This innovative text integrates mainstream sociological research in all areas of sociology with a scientifically-informed model of an evolved, biological human actor. This text allows students to better understand their emotional, social, and institutional worlds. It also illustrates how biological understanding naturally enhances the sociological approach. This grounding of sociology in a biosocial

conception of the individual actor is coupled with a comparative approach, as human biology is universal and often reveals itself as variations on themes across human cultures. Tables, Figures, Photos, and the author's concise and remarkably lively style make this a truly enjoyable book to read and teach. From iPhones and clothing to jewelry and food, the products those of us in the developed world consume and enjoy exist only through the labor and suffering of countless others. In his new book Bruce Robbins examines the implications of this dynamic for humanitarianism and social justice.

He locates the figure of the "beneficiary" in the history of humanitarian thought, which asks the prosperous to help the poor without requiring them to recognize their causal role in the creation of the abhorrent conditions they seek to remedy. Tracing how the beneficiary has manifested itself in the work of George Orwell, Virginia Woolf, Jamaica Kincaid, Naomi Klein, and others, Robbins uncovers a hidden tradition of economic cosmopolitanism. There are no easy answers to the question of how to confront systematic inequality on a global scale. But the first step,

Robbins suggests, is to acknowledge that we are, in fact, beneficiaries. This volume is the first dedicated to the growing field of theory and research on second language processing and parsing. The fourteen papers in this volume offer cutting-edge research using a number of different languages (e.g., Arabic, Spanish, Japanese, French, German, English) and structures (e.g., relative clauses, wh-gaps, gender, number) to examine various issues in second language processing: first language influence, whether or not non-natives can achieve native-like processing, the roles of context and

prosody, the effects of working memory, and others. The researchers include both established scholars and newer voices, all offering important insights into the factors that affect processing and parsing in a second language. PCMag.com is a leading authority on technology, delivering Labs-based, independent reviews of the latest products and services. Our expert industry analysis and practical solutions help you make better buying decisions and get more from technology. "A solid... insightful explanation of how the Internet has armed the consumer—which is to say, everyone—against

the mindless blather of corporate messaging attempts. Drop everything and read this book."—The Wall Street Journal The woman next to you in the coffee shop, typing madly on her laptop, just might be determining the ending to next year's block-buster film or how quickly the hottest new PDAT hits store shelves. In homes, dorm rooms, waiting rooms, planes and trains around the world, millions of people are exercising enormous influence on what we buy, even though they have no official connection to those products and services. Who are they? What motivates them?

Marketing experts Ben McConnell and Jackie Huba explore the ramifications of social media in *Citizen Marketers*. As everyday people increasingly create content on behalf of companies, brands or products, they are collaborating with others just like themselves and forming ever-growing communities of enthusiasts and evangelists. From the rough to the sophisticated, the "user-generated media" of blogs, online bulletin boards, podcasts, photos, songs, and animations are influencing companies' customer relationships, product design, and marketing campaigns, whether

they participate willingly or not. *Citizen Marketers* is the first book to document this phenomenon, examining some of the early winners and losers in this new genre, as well as some of its most noted constituents. With their exceptional knowledge of brands, products, companies and industries, the citizen marketers are democratizing traditional notions of communication and marketing, even entire business models. Features: Research on social media Case studies of people and organizations fueling the growth of citizen marketing Clarifies the context and importance of

technological and societal shifts that are changing the nature of customer expectations and relationships
Written For Practicing Physicians, Hospital-Physician Joint Venturers, Corporation Benefit Officers, Health Plan Executives, Healthcare Reformers, And Leaders Of The Consumer Movement, This Unique Text Is A Must-Have Resource Featuring Six Sections innovations in Small Practices, Large Group Practices, Hospital/Physician Relationships, Employer/Health Plans, Cost Constraints/Reforms, And Consumer-Driven ideas. It

gives us a great pleasure to present the proceedings of the 9th Asian Conference on Computer Vision (ACCV 2009), held in Xi'an, China, in September 2009. This was the first ACCV conference to take place in mainland China. We received a total of 670 full submissions, which is a new record in the ACCV series. Overall, 35 papers were selected for oral presentation and 131 as posters, yielding acceptance rates of 5.2% for oral, 19.6% for poster, and 24.8% in total. In the paper reviewing, we continued the tradition of previous ACCVs by conducting the process in a double-blind manner. Each of the 33 Area Chairs received a pool of about 20 papers and nominated a number of potential reviewers for each paper. Then, Program Committee Chairs allocated at least three reviewers to each paper, taking into consideration any conflicts of interest and the balance of loads. Once the reviews were finished, the Area Chairs made summary reports for their papers in their pools, based on the reviewers' comments and on their own assessments of the papers. Honoring the twenty-fifth anniversary of one of the most influential books in the history of business strategy and ethics, R. Edward Freeman's Strategic Management: A Stakeholder Approach, this work assembles a collection of contributions by the most influential and widely cited scholars working in the area of stakeholder scholarship today. The analyses collected here comment on the impact Freeman's book - and stakeholder theory more generally - has had upon the fields of management and organizational ethics. This study also includes original responses from Freeman himself. As the conversation about stakeholders hits its academic and

le-blind manner. Each of the 33 Area Chairs received a pool of about 20 papers and nominated a number of potential reviewers for each paper. Then, Program Committee Chairs allocated at least three reviewers to each paper, taking into consideration any conflicts of interest and the balance of loads. Once the reviews were finished, the Area Chairs made summary reports for their papers in their pools, based on the reviewers' comments and on their own assessments of the papers. Honoring the twenty-fifth anniversary of one of the most influential books in the history of business strategy

and ethics, R. Edward Freeman's Strategic Management: A Stakeholder Approach, this work assembles a collection of contributions by the most influential and widely cited scholars working in the area of stakeholder scholarship today. The analyses collected here comment on the impact Freeman's book - and stakeholder theory more generally - has had upon the fields of management and organizational ethics. This study also includes original responses from Freeman himself. As the conversation about stakeholders hits its academic and

popular stride, this timely volume provides both a retrospective of stakeholder theory's history as well as a guide to the questions that are likely to emerge during the next quarter century, providing a new foundation for

future theory and practice. This volume will be an indispensable resource for any serious scholar working in the area of stakeholder theory. Additionally, because the language of managing

stakeholder relationships is becoming increasingly popular, practicing executives and NGO members will find this an exceptional and informative reference.
