Polymer electrolyte membrane fuel cells (PEMFCs) and direct methanol fuel cells (DMFCs) technology are promising forms of low-temperature electrochemical power conversion technologies that operate on hydrogen and methanol respectively. Featuring high electrical efficiency and low operational emissions, they have attracted intense worldwide commercialization research and development efforts. These R&D efforts include a major drive towards improving materials performance, fuel cell operation and durability. In situ characterization is essential to improving performance and extending operational lifetime through providing information necessary to understand how fuel cell materials perform under operational loads. Polymer Electrolyte Membrane and Direct Methanol Fuel Cell Technology, Volume 2 details in situ characterization, including experimental and innovative techniques, used to understand fuel cell operational issues and materials performance. Part I reviews enhanced techniques for characterization of catalyst activities and processes, such as X-ray absorption and scattering, advanced microscopy and electrochemical mass spectrometry. Part II reviews characterization techniques for water and fuel management, including neutron radiography and tomography, magnetic resonance imaging and Raman spectroscopy. Finally, Part III focuses on locally

resolved characterization methods, from transient techniques and electrochemical microscopy, to laser-optical methods and synchrotron radiography. With its international team of expert contributors, Polymer electrolyte membrane and direct methanol fuel cell technology will be an invaluable reference for low temperature fuel cell designers and manufacturers, as well as materials science and electrochemistry researchers and academics. Clear, comprehensive, practical advice provides prisoners

with everything they need to know on conditions of confinement, civil liberties in prison, procedural due process, the legal system, how to litigate, conducting effective legal research, and writing legal documents. Written by two legal and penitentiary experts with intimate knowledge of prisoner's rights and legal aid work, authors John Boston and Daniel E. Manville strategically focus on federal constitutional law, providing prisoners and those wishing to assist them with the most important information concerning legal rights. Over the past decade, prison law and conditions have changed significantly. This new edition is updated to include the most relevant prisoners' rights topics and approaches to litigation. Updates include all aspects of prison life as well as material on legal research, legal writing, types of legal remedies, and how to effectively use those remedies. Certainly the most authoritative, well-organized and relevant prisoner's rights manual available -- the eagerly awaited fourth edition should be purchased by everyone interested in civil rights for the incarcerated. Concise and practical, the Penn Clinical Manual of Urology is an indispensable guide to the daily practice of urology. This one-volume medical reference book presents the key clinical information you need to diagnose and treat urologic disorders quickly and effectively, featuring brief, well-illustrated chapters and an easy-to-read format. Essential for clinical questions and answers, the Penn Clinical Manual of Urology deserves a place on the bookshelf of not only every urologist, but every provider treating urologic problems. Consult this title on your favorite e-

reader, conduct rapid searches, and adjust font sizes for optimal readability. Find information quickly and easily with a format that includes clearly presented algorithms, tables, and figures. Effectively review for the boards using the self-assessment questions at the end of each chapter. Stay abreast of new AUA and ICI Incontinence guidelines, and access up-to-date information on the latest treatment recommendations, therapy for castrate-resistant prostate cancer, and active surveillance for prostate cancer. Effectively prepare for board examinations and recertification. Understand and apply evaluation and management techniques for male subfertility and androgen deficiency. Focus on today's hot topics in urology, including stress and mixed urinary incontinence; prolapse therapy; therapy for overactive bladder; and targeted therapy for renal cell carcinoma. Take advantage of chapters that offer a thorough review of the major categories of urologic diseases and integrate radiology, radiation therapy, nephrology, pediatric urology, transplantation surgery, and vascular surgery. In this text, contributors explore the historical, conceptual methodological and empirical foundations that link the two fields of personality psychology and social psychology across numerous domains. Concerned with the ways humans develop an organised set of characteristics to shape themselves

and the world around them, this is a study of how people come to be 'different' and 'similar' to others, on both an individual and a cultural level. This volume explores the scientific foundations of personality and individual differences, in chapters arranged across three thematic sections. Handbook of Behavioral Medicine presents a comprehensive overview of the current use of behavioral science techniques in the prevention, diagnosis, and treatment of various health related disorders. Features contributions from a variety of internationally recognized experts in behavioral medicine and related fields Includes authors from education, social work, and physical therapy Addresses foundational issues in behavioral medicine in Volume 1, including concepts, theories, treatments, doctor/patient relationships, common medical problems, behavioral technologies, assessment, and methodologies Focuses on medical interface in Volume 2, including issues relating to health disorders and specialties; social work, medical sociology, and psychosocial aspects; and topics relating to education and health 2 Volumes The burgeoning multidisciplinary field of social and emotional learning (SEL) now has a comprehensive and definitive handbook covering all aspects of research, practice, and policy. The prominent editors and contributors describe state-of-the-art intervention and prevention programs designed to build students' skills for managing emotions, showing concern for others, making responsible decisions, and forming positive relationships. Conceptual and scientific underpinnings of SEL are explored and its relationship to children's and

adolescents' academic success and mental health examined. Issues in implementing and assessing SEL programs in diverse educational settings are analyzed in depth, including the roles of school- and district-level leadership, teacher training, and school-family partnerships. Narratives of possession have survived in early English medical and philosophical treatises. Using ideas derived from cognitive science, this study moves through the stages of possession and exorcism to describe how the social, religious, and medical were internalized to create the varied manifestations of demon possession in early modern England. This highly anticipated third edition of the Handbook of Parenting brings together an array of field-leading experts who have worked in different ways toward understanding the many diverse aspects of parenting. Contributors to the Handbook look to the most recent research and thinking to shed light on topics every parent, professional, and policymaker wonders about. Parenting is a perennially "hot" topic. After all, everyone who has ever lived has been parented, and the vast majority of people become parents themselves. No wonder bookstores house shelves of "how-to" parenting books, and magazine racks in pharmacies and airports overflow with periodicals that feature parenting advice. However, almost none of these is evidence-based. The Handbook of Parenting is. Period. Each chapter has been written to be read and absorbed in a single sitting, and includes historical considerations of the topic, a discussion of central issues and theory, a review of classical and modern research, and forecasts of future directions of theory and research. Together,

the five volumes in the Handbook cover Children and Parenting, the Biology and Ecology of Parenting, Being and Becoming a Parent, Social Conditions and Applied Parenting, and the Practice of Parenting. Volume 3, Being and Becoming a Parent, considers a large cast of characters responsible for parenting, each with her or his own customs and agenda, and examines what the psychological characteristics and social interests of those individuals reveal about what parenting is. Chapters in Part I, on The Parent, show just how rich and multifaceted is the constellation of children's caregivers. Considered first are family systems and then successively mothers and fathers, coparenting and gatekeeping between parents, adolescent parenting, grandparenting, and single parenthood, divorced and remarried parenting, lesbian and gay parents and, finally, sibling caregivers and nonparental caregiving. Parenting also draws on transient and enduring physical, personality, and intellectual characteristics of the individual. The chapters in Part II, on Becoming and Being a Parent, consider the intergenerational transmission of parenting, parenting and contemporary reproductive technologies, the transition to parenthood, and stages of parental development, and then chapters turn to parents' well-being, emotions, self-efficacy, cognitions, and attributions as well as socialization, personality in parenting, and psychoanalytic theory. These features of parents serve many functions: they generate and shape parental practices, mediate the effectiveness of parenting, and help to organize parenting. In the last fifteen years there has been a revolution in

the techniques available for the analysis and isolation of proteins. Every time a new technique has been introduced, numerous papers have appeared describing modifications to it and the research worker who wishes to employ these methods is faced with a very serious problem in deciding which particular variant to use. These volumes are intended to provide the fullest practical detail so that any scientist can follow the procedure by using this book alone and without having recourse to the original literature. The techniques which are described in full are ones in which all the authors have had first-hand experience, and the descriptions contain those small but important points which save so much time. In the first volume, separation and isolation procedures are discussed; the second concerns its analysis and reactivity, and the third volume with the measurement of the macromolecular properties of proteins. Analytical Methods of Protein Chemistry, Volume 3: Determination of the Size and Shape of Protein Molecules provides information pertinent to the analysis and isolation of protein. This book deals with the measurement of the macromolecular properties of proteins. Organized into seven chapters, this volume begins with an overview of the theory and practice of the electron microscope to allow an understanding of the type of object that may be examined. This text then describes the methods of making protein molecules conform to such an ideal, which are the techniques of specimen preparation. Other chapters consider the determinations of osmotic pressures of proteins. This book discusses as well the experimental basis for the theory of the diffusion process in liquids.

The final chapter deals with the technical problem characteristics of light-scattering. This book is a valuable resource for electron microscopists, protein chemists, biologists, physicist, physico-chemists, scientists, and research workers.

Litigating International Investment Disputes: A Practitioner's Guide serves as a comprehensive and straightforward resource for those who are new to international investment arbitration, as well as for seasoned practitioners. Helena Hartmann examines the crucial concepts of cognitive empathy, emotional egocentricity and social pain of individuals with Autism Spectrum Disorder (ASD). She thereby provides valuable insights into the investigation of social cognition of both the neurotypical as well as autistic population. Since past research has revealed that individuals with ASD often face problems regarding cognitive empathy, they might also exhibit more difficulties in correctly classifying and distinguishing feelings of themselves and other people. In order to verify this hypothesis, one group with and one without ASD underwent functional magnetic resonance imaging while playing Cyberball, a virtual ball-toss game known to create feelings of social inclusion or exclusion. These findings should not only expand former research but also contribute to a better understanding of the social and emotional impairments of this group. The microscopic examination of fossilized bone tissue is a sophisticated and increasingly important analytical tool for understanding the life history of ancient organisms. This book provides an essential primer and manual for using fossil bone histology to

investigate the biology of extinct tetrapods. Twelve experts summarize advances in the field over the past three decades, reviewing fundamental basics of bone microanatomy and physiology. Research specimen selection, thin-section preparation, and data analysis are addressed in detail. The authors also outline methods and issues in bone growth rate calculation and chronological age determination, as well as how to examine broader questions of behavior, ecology, and evolution by studying the microstructure of bone. This two volume set covers the engineering and clinical benefits in diagnosis of human pathologies, including the protocols and potential of advanced tomography scanning with very high quality CT images. With contributions from world-class experts, the book examines all aspects of CT technologies related to neck-brain, cardiovascular systems, thorax, abdomen and GI system, pelvis and urinary system, and musculoskeletal system. It also provides coverage of CAD applications to CT along with a discussion of the potential dangers of CT in terms of over-radiation, particularly related to children. Now more than ever, people are turning to their rabbis and communities to seek the consolation they need in times of mourning and bereavement. As such, the field of pastoral care is becoming increasingly important to clergy of all faiths. *To Walk in God's Ways: Jewish Pastoral Perspectives on Illness and Bereavement* illustrates how the structure and themes of Jewish tradition, using cognitive empathy, allow both the community and rabbi to help the patient and mourner alleviate his or her suffering. Includes entries for maps and atlases *The Atlas of*

Genitourinary Oncological Imaging presents a comprehensive visual review of appearances for normal anatomy and oncological diseases in the genitourinary system using over 900 radiological images and illustrations. The book presents current imaging techniques and discusses the role of imaging in pre-treatment staging and post-treatment follow-up. Diseases discussed include kidney, adrenal gland, upper tract, bladder, prostate, testes, and pediatric malignancies. Individual chapters include normal anatomy, imaging techniques, and pathology of each cancer type. The staging of the malignancy and what to include in the radiology report are discussed, and expected and complicated postoperative and post-treatment findings and recurrence are presented. Dedicated chapters on interventional and radiation therapy discuss their unique role in the management and treatment of oncology of the genitourinary system. Additionally, a chapter on chemotherapy toxicities discusses drug reaction treatment therapies unique to the genitourinary system. Edited and written by radiologists from the genitourinary disease management team at Memorial Sloan-Kettering Cancer Center, the Atlas of Genitourinary Oncological Imaging is an ideal resource for radiology and urology trainees seeking a review of the basics and for practicing radiologists looking for answers to challenging cases confronted in daily practice. -- PM is the ultimate guide to our high-tech lifestyle. Chermak and Musiek's two-volume, award-winning handbooks are back in newly revised editions. Extensively revised and expanded, Volume I provides comprehensive coverage of the auditory neuroscience and clinical science needed to accurately diagnose the range of developmental and acquired central auditory processing disorders in children, adults, and older adults. Building on the excellence achieved with the best-selling 1st editions which earned the 2007 Speech, Language, and Hearing Book of the Year Award, the second editions include contributions from world-renowned authors detailing major advances in auditory neuroscience and cognitive science; diagnosis; best practice intervention strategies in clinical and school settings; as well as emerging and future directions in diagnosis and intervention. Exciting new chapters for Volume II include: Development of the Central Auditory Nervous System, by Jos J. Eggermont Causation: Neuroanatomic Abnormalities, Neurological Disorders, and Neuromaturational Delays, by Gail D. Chermak and Frank E. Musiek Central Auditory Processing As Seen From Dichotic Listening Studies, by Kenneth Hugdahl and Turid Helland Auditory Processing (Disorder): An Intersection of Cognitive, Sensory, and Reward Circuits, by Karen Banai and Nina Kraus Clinical and Research Issues in CAPD, by Jeffrey Weihsing, Teri James Bellis, Gail D. Hurley The CANS and CAPD: What We Know and What We Need to Learn, by Dennis P. Phillips

Providing an overview of the myriad ways that we are touched by death and dying, both as an individual and as a member of society, this book will help readers understand our relationship with death. Kastenbaum and Moreman show how various ways that individual and societal attitudes influence both how and when we die and how we live and deal with the knowledge of death and loss. This landmark text draws on contributions from the social and behavioral sciences as well as the humanities, such as history, religion, philosophy, literature, and the arts, to provide thorough coverage of understanding death and the dying process. *Death, Society, and Human Experience* was originally written by Robert Kastenbaum, a renowned scholar who developed one of the world's first death education courses. Christopher Moreman, who has worked in the field of death studies for almost two decades specializing in afterlife beliefs and experiences, has updated this edition.
