Collection of the monthly climatological reports of the United States by state or region, with monthly and annual national summaries. Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better. The engineering enterprise is a pillar of U.S. national and homeland security, economic vitality, and innovation. But many engineering tasks can now be performed anywhere in the world. The emergence of "offshoring"- the transfer of work from the United States to affiliated and unaffiliated entities abroad - has raised concerns about the impacts of globalization. The Offshoring of Engineering helps to answer many questions about the scope, composition, and motivation for offshoring and considers the implications for the future of U.S. engineering practice, labor markets, education, and research. This book examines trends and impacts from a broad perspective and in six specific industries - software, semiconductors, personal computer manufacturing, construction engineering and services, automobiles, and pharmaceuticals. The Offshoring of Engineering will be of great interest to engineers, engineering professors and deans, and policy makers, as well as people outside the engineering community who are concerned with sustaining and strengthening U.S. engineering capabilities in support of homeland security, economic vitality, and innovation. Millions of Americans have turned to Jean Chatzky for financial advice, thanks to her weekly appearances on NBC's Today and her column in Money magazine. Now, in The Ten Commandments of Financial Happiness (published in hardcover as You Don't Have to Be Rich), she analyzes the results of a unique survey in which she questioned 1,500 Americans about their financial attitudes and behaviors. She looks at how much money people actually do need to guarantee a happy, comfortable life. And gets down to the nitty-gritty, isolating behaviors that—if adopted—can significantly improve a life. The results of this proprietary survey—conducted with the help of the Roper Center—are remarkable. Chatzky found that while a certain amount of money buys comfort, money can't make you happy—at least not in the way most people believe it can. But it can make you miserable, if you're managing it wrong. That's why it's time to make a change. In her frank, engaging style, Chatzky explains how to "own your money" to create a happy and comfortable life. She outlines the financial habits of happy people and shows how anyone can be a part of this group, no matter what they earn. Filled with fresh insights and real life examples,

The Ten Commandments of Financial Happiness reaffirms that finances don't have to be a source of stress and that living within your means can be extremely rewarding. Each year car manufacturers release new production models that are unique and innovative. These cars begin as concepts then go through the process of prototyping. The process of creating a new model can take years, involving extensive testing and refining of aerodynamics, safety, engine components, and vehicle styling. The production model is the result of this lengthy process, and its new technologies reflect the latest engineering standards as well as market trends. The 2014 Passenger Car Yearbook details the key engineering developments in the passenger vehicle industry of the year. Each new car model is profiled in its own chapter with one or more articles that were previously published and written by the award-winning editors of Automotive Engineering International. The novel engineering aspects of each new model are explored in depth. Interviews with key developers and engineers are included for some of the models, providing inside details about how initial ideas evolved in the cars that consumers drive. Published for enthusiasts who are interested in new car models and their technologies, as well as practicing automotive engineers who are interested in new engineering trends such as hybrid systems, powertrain designs, automotive design, lightweighting, and materials, and new engineers who want an overview of current trends, the 2014 Passenger Car Yearbook also:

- Provides a single source for information on the key engineering trends of one year.

• Allows the reader to skip to chapters that cover specific car models that interest them, or read about all models from beginning to end. • Makes for dynamic reading, with its large number of big, full-color images and easy-reading magazine format. Every company can point to a growth strategy. Far fewer, however, systematically implement them; instead, they spend their time on incremental innovations, or rely on acquisitions. Still, organic, internal growth, accomplished through product line renewal and new service development, is essential to the long-term vitality of corporations across all industries. The FASTPATH to Growth takes on the challenge large corporations have in generating internal innovation--developing new product lines that address new market applications and provide the corporation with new streams of revenue. It integrates the key disciplines--new product strategy, user research, concept development and prototyping, market testing, and

business modeling--needed for enterprise growth. The book illustrates its framework with in-depth examples of companies that have leveraged their core technologies to new markets and new types of uses in order to generate impressive results, including IBM, Honda, and Mars. Many of these examples contain templates that readers can use in their own projects. The book ends by addressing the human side of new market applications, providing advice on what executives and innovation team leaders must do to execute the steps of Meyers framework for new market applications development. This comprehensive management guide should appeal to practitioners in research and development, new business development strategists, and product managers, along with students in engineering management, innovation management, and corporate strategy courses that focus on technology industries.
