Volume II of The Official History of the UK Strategic Nuclear Deterrent provides an authoritative and in-depth examination of the British government's strategic nuclear policy from 1964 to 1970. Written with full access to the UK documentary record, Volume II examines the controversies that developed over nuclear policy following the arrival in office of a Labour government led by Harold Wilson in October 1964 that openly questioned the independence of the deterrent. Having decided to preserve the Polaris programme, Labour ministers were nevertheless committed not to develop another generation of nuclear weapons beyond those in the pipeline, placing major doubts over the long-term future of the nuclear programme and collaboration with the United States. Defence planners also

became increasingly concerned that the deployment of Soviet anti-ballistic missile (ABM) defences around Moscow threatened to undermine the ability of Polaris to fulfil its role as a national strategic nuclear deterrent. During 1967, under heavy pressures to control defence spending, a protracted debate was conducted within Whitehall over the future of Polaris and how to respond to the evolving ABM challenge. The volume concludes with Labour's defeat at the general election of June 1970, by which time the Royal Navy had assumed the nuclear deterrent role from the RAF, and plans had already been formulated for a UK project to improve Polaris which could both ensure its continuing credibility and rejuvenate the Anglo-American nuclear relationship. This book will be of much interest to students of British politics, Cold War history, nuclear proliferation and international relations.

Sleep Disorders Medicine: Basic Science, Technical Considerations, and Clinical Aspects presents the scientific basis for understanding sleep. This book provides information on the diagnosis and treatment of a wide variety of sleep disorders. Organized into 28 chapters, this book begins with an overview of the cerebral activity of wakefulness and the cerebral activity of sleep. This text then discusses the effects on mental and physical health of non-rapid eye movement (NREM) sleep, rapid eye movement (REM) sleep, and all sleep. Other chapters consider the neurophysiology and cellular pharmacology of sleep mechanisms. This book discusses as well the physiologic changes that occur in both the autonomic and somatic nervous system during sleep. The final chapter deals with the application of nasal continuous positive airway pressure for the treatment of obstructive apnea in adults. This book is a valuable resource for neurologists, internists, psychiatrists, pediatricians, otolaryngologists, neurosurgeons, psychologists, neuroscientists, and general practitioners. "Siblings Bob and Tom get a dog with spots. This A-level story uses decodable text to raise confidence in early readers. The book uses a combination of sight words and short-vowel words in repetition to build recognition. Original illustrations help guide readers through the text."--

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardized up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime

Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation. Robert J. Blackwell Assistant Secretary for Maritime Affairs Animal research has contributed greatly to our understanding of the special capability of the frontal lobes to respond to a variety of input from "lower order" sensory and posterior association cortex and this and other observations are reported in this volume. Findings that functions dependent on the frontal lobes emerge late in ontogeny and appear to decline early in normal aging are reviewed and their implications for neuropsychology are discussed. In this volume the concept of working memory is discussed in relationship to both functional neuroimaging and patient studies. Gross distinctions in the functioning of the prefrontal cortex have divided it topographically into dorsolateral and ventromedial sectors. Chapters highlighting the role of the dorsolateral and ventromedial sectors from both neuroimaging and lesion perspectives are also included. Computational modeling has taken center-stage in cognitive neuroscience and its usefulness in testing different theoretical stances about the role of the frontal lobes in information processing is presented.

Rose is a princess, a Cinder, and half-human. She is the last one born of her kind, and on her twenty-first birthday, she must enter the woods and travel to find her Prince, as her sisters did before her. ". . . And we will all dance at the Grand Ball," her sisters would always say. But the Human servants are keeping a secret that could prevent the Cinders from reaching their Happily Ever After....Hidden in Rose's dreams and vision are the answers of the past between Cinders and Humans, and she is quickly running out of time trying to solve their hidden messages. She knows the answer lies in her first clue--identifying an animal she has never seen before--that persistent vision of a furry white animal, holding a gold metal object and exclaiming, "Oh dear! Oh dear! I shall be too late!"

politics was broken. Continued attempts to appease all had led successive governments to become ineffective and incompetent to govern. All parties had lost touch with general public opinion, listening instead to the vocal minority representing fringe groups. Although the people could see what was happening and were fed up with it, they didn't know what they could do about it, as all current political parties were the same. A chance encounter with an employee at a factory that the prime minister was visiting changed all that. The verbal exchange went viral on YouTube. Encouraged by public reaction and the advice of a close friend, Clive decided to form his own political party and take Australia out of the political abyss it had fallen into. This is his story.

With advice from some of children's fiction's brightest stars including Holly Black, Cassandra Clare and Kody Keplinger. "The classification of this book is in our opinion an excellent one showing great industry and intelligence in the author, probing far into the minute subdivision of knowledge. Every librarian, no matter to what system he is pledged, will find it of the greatest advantage to keep Mr. Brown's work beside him for frequent consultation. A huge quantity of that miscellaneous information for which the librarian not seldom... delves anxiously in gazetteer, or dictionary, or elsewhere, is here ready for use. No one who is committed to the Dewey classification and notation need in our opinion change to this one and (perhaps through prejudice!) the Dewey classification plus the Dewey notation seems to us a more potent instrument for dealing with large libraries, but the Brown classification and the Brown notation show in several important points superiority to Dewey." -Review by E. A. Savage, Library World. * * * * With the advance of the open access the time has arrived when libraries should adopt a uniform classification scheme. The two systems now in general use are the Dewey decimal classification and the Cutter expansive classification. James Duff Brown issues this season a new scheme with a novel series of tables enabling subjects to be subdivided to any extent. "The scheme is so arranged that it can be applied to the largest library or the small collection." The Dewey system is in more universal use than the Cutter, but it is badly in need of revision. Mr. Dewey is at work on the new edition. He believes it would be foolish to re-east the classification "In view of the amount of cataloging that has been done by the present scheme." European as well as American librarians are being consulted in order to make the classification suitable for international use. The Cutter system "is distinguished as being the most logical and modern in its nomenclature of the recent systems. ... It is coming

into use in a good many American libraries, and when the final expansion is finished and provided with an index will undoubtedly be more used still." It is urged upon the Library association to evolve a scheme worthy of universal adoption. --Library Work, Vol. 1

Designed for children ages 6 and above, this cornerstone guide provides parents with hands-on techniques and fun activities to teach children the MegaSkills that will give them school and life success. Using circuit diagrams, PCB layouts, parts lists and clear construction and installation details, this book provides everything someone with a basic knowledge of electronics needs to know in order to put that knowledge into practice. This latest collection of Maplin projects are a variety of power supply projects, the necessary components for which are readily available from the Maplin catalogue or any of their high street shops. Projects include, laboratory power supply projects for which there are a wide range of applications for the hobbyist, from servicing portable audio and video equipment to charging batteries; and miscellaneous projects such as a split charge unit for use in cars or similar vehicles when an auxiliary battery is used to power 12v accessories in a caravan or trailer. Both useful and innovative, these projects are above all practical and affordable. This book presents the first comprehensive overview of the properties and fabrication methods of GaN-based power transistors, with contributions from the most active research groups in the field. It describes how gallium nitride has emerged as an excellent material for the fabrication of power transistors; thanks to the high energy gap, high breakdown field, and saturation velocity of GaN, these devices can reach breakdown voltages beyond the kV range, and very high switching frequencies, thus being suitable for application in power conversion systems. Based on GaN, switching-mode power converters with efficiency in excess of 99 % have been already demonstrated, thus clearing the way for massive adoption of GaN transistors in the power conversion market. This is expected to have important advantages at both the environmental and economic level, since power conversion losses account for 10 % of global electricity consumption. The first part of the book describes the properties and advantages of gallium nitride compared to conventional semiconductor materials. The second part of the book describes the techniques used for device fabrication, and the methods for GaN-on-Silicon mass production. Specific attention is paid to the three most advanced device structures: lateral transistors, vertical power devices, and nanowire-based HEMTs. Other relevant topics covered by the book are the strategies for normally-off operation, and the problems related to device reliability. The last chapter reviews the switching characteristics of GaN HEMTs based on a systems level approach. This book is a unique reference for people working in the materials, device and power electronics fields; it provides interdisciplinary information on

material growth, device fabrication, reliability issues and circuit-level switching investigation. Multimedia Systems discusses the basic characteristics of multimedia operating systems, networking and communication, and multimedia middleware systems. The overall goal of the book is to provide a broad understanding of multimedia systems and applications in an integrated manner: a multimedia application and its user interface must be developed in an integrated fashion with underlying multimedia middleware, operating systems, networks, security, and multimedia devices. Fundamental characteristics of multimedia operating and distributed communication systems are presented, especially scheduling algorithms and other OS supporting approaches for multimedia applications with soft-real-time deadlines, multimedia file systems and servers with their decision algorithms for data placement, scheduling and buffer management, multimedia communication, transport, and streaming protocols, services with their error control, congestion control and other Quality of Service aware and adaptive algorithms, synchronization services with their skew control methods, and group communication with their group coordinating algorithms and other distributed services.

Rising young comedian Moshe Kasher is lucky to be alive. He started using drugs when he was just 12. At that point, he had already been in psychoanalysis for 8 years. By the time he was 15, he had been in and out of several mental institutions, drifting from therapy to rehab to arrest to...you get the picture. But KASHER IN THE RYE is not an "eye opener" to the horrors of addiction. It's a hilarious memoir about the absurdity of it all. When he was a young boy, Kasher's mother took him on a vacation to the West Coast. Well it was more like an abduction. Only not officially. She stole them away from their father and they moved to Oakland , California. That's where the real fun begins, in the war zone of Oakland Public Schools. He was more than just out of control- his mother walked him around on a leash, which he chewed through and ran away. Those early years read like part Augusten Burroughs, part David Sedaris, with a touch of Jim Carrol...but a lot more Jewish. In fact, Kasher later spends time in a Brooklyn Hasidic community. Then came addiction... Brutally honest and laugh-out-loud funny, Kasher's first literary endeavor finds humor in even the most horrifying situations. How far would you go to find yourself? Imagine everything you thought you knew about yourself turned out to be a lie, and you didn't know who was telling the truth. Imagine you possessed a secret so dangerous that, if it were exposed, it would reshape the entire world. What would you do if that secret were your very identity? In almost every way, Palo Vista seems like a typical California city, with office buildings, schools, and homes sprawled out across suburbia, filled with families making a life for themselves at the dawn of the new millennium. But two seniors at Mt. MacMurray High are

about to find out that nothing is as it seems. Jason Nix is a star athlete and honors student who can't seem to remember anything about his childhood. Elyse Van Auten is a budding artist from a broken home whose father left her mother two years ago - or so she's been led to believe. Like most teens entering adulthood, Elyse and Jason just want to find out who they really are. For them, however, the stakes go far beyond their own personal quest. Join them on a journey of self-discovery that becomes a desperate fight for survival against enemies determined to conceal the truth ... and find out what happens when that fight becomes personal.
