Will using interaction in small groups about homework assignments increase students' completion of homework assignments? Oct 24 2019 Research Paper (postgraduate) from the year 2007 in the subject Pedagogy - General, grade: 1,0, Samford University (Orlean Bullard Beeson School of Education & Professional Studies), course: The professional secondary language Arts/English teacher, language: English, abstract: This paper is part of an observation as a clinical experience requirement of the course listed on the title page. It takes place at a High School in a 10th grade history class under Mr.E.'s leadership. The class, which I attend twice a week for one period, consists of 16 students (eight of them are male, eight female). As far as I'm concerned, I am a German exchange student spending one semester at Samford University with the main objective of improving my English since I'm going to be a secondary school teacher back in Germany. English is – alongside with German and Physical Education – one of the subjects that I'm going to teach. This semester is my fourth one, so I would be pretty much a sophomore in the American Educational System. However, the German Educational System works quite differently which is the reason for still having approximately four years of study to complete. Before being able to start an action research, the researcher has to identify a research question. It is raised the question which matters could be of interest. After having led a conversation with my mentor about an interesting field of investigation, we came to the conclusion that the completion of homework was an important concern. He told me about his difficulties in coping with this problem in 10th grade in history. He was willing to figure out a solution to the apparently big problem. Since some students don't do any homework at all regularly, it is definitely a problem worth taking into focus. There are multiple ways to deal with unsatisfactory homework behavior of students. Punishment in form of extra work is probably one of the most common means to encounter it. Yet, multiple generations of teachers have already applied this measure, but the problem has, quite obviously, not vanished. Therefore, this method doesn't seem to work appropriately. This is, in my opinion, due to the fact that students are only extrinsically motivated in this case. Another example of extrinsic motivation is rewarding. Yet it may be helpful in some cases, it is still a means of extrinsic motivation and therefore not last perpetual wisdom. Extrinsic motivation is not a long-ranging solution to the problem. There are other options to take.

Writing to Explore Aug 22 2019 In *Writing to Explore*, David and Peter demonstrate how to teach adventure writing, which integrates nonfiction and fiction and motivates students to write with imagination, curiosity, and a hunger to learn everything about their topic. The book starts with a solid foundation in the basics of good writing: setting descriptions, writing atmosphere, and character development. The authors then explore the specific elements of adventure writing--from setting the stage to conducting research; from combining history and geography to effectively utilizing technology. The result is an adventure-based paper that is "rooted in real places, supported by facts, and developed with detailed description of images from real locations." Teachers will find handouts, sample activities, student writing examples, research sources, and tips to help them create a nonfiction writing program based around the adventure writing model. As a collection, the ten studies featured in this book are the crème de la crème of submissions to the Middle Grades Research Journal between August 2006 and December 2008. They are the ten highest peer reviewed manuscripts examined by members of the MGRJ Review Board - each having undergone careful "blinded" examination by three or more experts in the sub-specialty area addressed by the research study conducted. In addition, each study serves to exemplify how sound, practical research findings can be linked to classroom practice in middle grades classrooms. Middle Grades Research: Exemplary Studies Linking Theory to Practice is a must read for university professors and a useful tool for middle grades educators across all subject areas and school settings. Professors who teach middle grades courses, at both the undergraduate and graduate levels, will find the book to be a superb supplemental / accelerated readings text.
