Computer Vision Metrics Aug 11 2021 Computer Vision Metrics provides an extensive survey and analysis of over 100 current and historical feature description and machine vision methods, with a detailed taxonomy for local, regional and global features. This book provides necessary background to develop intuition about why interest point detectors and feature descriptors actually work, how they are designed, with observations about tuning the methods for achieving robustness and invariance targets for specific applications. The survey is broader than it is deep, with over 540 references provided to dig deeper. The taxonomy includes search methods, spectra components, descriptor representation, shape, distance functions, accuracy, efficiency, robustness and invariance attributes, and more. Rather than providing 'how-to' source code examples and shortcuts, this book provides a counterpoint discussion to the many fine opencv community source code resources available for hands-on practitioners.

I Overcame My Autism and All I Got Was This Lousy Anxiety Disorder Nov 26 2022 Sarah Kurchak is autistic. She hasn't let that get in the way of pursuing her dream to become a writer, or to find love, but she has let it get in the way of being in the same room with someone chewing food loudly, and of cleaning her bathroom sink. In *I Overcame My Autism and All I Got Was This Lousy Anxiety Disorder*, Kurchak examines the Byzantine steps she took to become "an autistic success story," how the process almost ruined her life and how she is now trying to recover. Growing up undiagnosed in small-town Ontario in the eighties and nineties, Kurchak realized early that she was somehow different from her peers. She discovered an effective strategy to fend off bullying: she consciously altered nearly everything about herself—from her personality to her body language. She forced herself to wear the denim jeans that felt like being enclosed in a sandpaper iron maiden. Every day, she dragged herself through the door with an elevated pulse and a churning stomach, nearly crumbling under the effort of the performance. By the time she was finally diagnosed with autism at twenty-seven, she struggled with depression and anxiety largely caused by the same strategy she had mastered precisely. She came to wonder, were all those years of intensely pretending to be someone else really worth it? Tackling everything from autism parenting culture to love, sex, alcohol, obsessions and professional pillow fighting, Kurchak's enlightening memoir challenges stereotypes and preconceptions about autism and considers what might really make the lives of autistic people healthier, happier and more fulfilling.

Computer Organization and Design Apr 07 2021 This best selling text on computer organization has been thoroughly updated to reflect the newest technologies. Examples highlight the latest processor designs, benchmarking standards, languages and tools. As with previous editions, a MIPS processor is the core used to present the fundamentals of hardware technologies at work in a computer system. The book presents an entire MIPS instruction set—instruction by instruction—the fundamentals of assembly language, computer arithmetic, pipelining, memory hierarchies and I/O. A new aspect of the third edition is the explicit connection between program performance and CPU performance. The authors show how hardware and software components--such as the specific algorithm, programming language, compiler, ISA and processor implementation--impact program performance. Throughout the book a new feature focusing on program performance describes how to search for bottlenecks and improve performance in various parts of the system. The book digs deeper into the hardware/software interface, presenting a complete view of the function of the programming language and compiler--crucial for understanding computer organization. A CD provides a toolkit of simulators and compilers along with tutorials for using them. For instructor resources click on the grey "companion site" button found on the right side of this page. This new edition represents a major revision. New to this edition: * Entire Text has been updated to reflect new technology * 70% new exercises. * Includes a CD loaded with software, projects and exercises to support courses using a number of tools * A new interior design presents defined terms in the margin for quick reference * A new feature, "Understanding Program Performance" focuses on performance from the programmer's perspective * Two sets of exercises and solutions, "For More Practice" and "In More Depth," are included on the CD * "Check Yourself" questions help students check their understanding of major concepts * "Computers In the Real World" feature illustrates the diversity of uses for information technology *More detail below...

Enemy at the Water Cooler Dec 23 2019 The book covers a decade of work with some of the largest commercial and government agencies around the world in addressing cyber security related to malicious insiders (trusted employees, contractors, and partners). It explores organized crime, terrorist threats, and hackers. It addresses the steps organizations must take to address insider threats at a people, process, and technology level. Today's headlines are littered with

news of identity thieves, organized cyber criminals, corporate espionage, nation-state threats, and terrorists. They represent the next wave of security threats but still possess nowhere near the devastating potential of the most insidious threat: the insider. This is not the bored 16-year-old hacker. We are talking about insiders like you and me, trusted employees with access to information - consultants, contractors, partners, visitors, vendors, and cleaning crews. Anyone in an organization's building or networks that possesses some level of trust. * Full coverage of this hot topic for virtually every global 5000 organization, government agency, and individual interested in security. * Brian Contos is the Chief Security Officer for one of the most well known, profitable and respected security software companies in the U.S.—ArcSight.
