Topological Insulators Sep 11 2021 This new edition presents a unified description of these insulators from one to three dimensions based on the modified Dirac equation. It derives a series of solutions of the bound states near the boundary, and describes the current status of these solutions. Readers are introduced to topological invariants and their applications to a variety of systems from one-dimensional polyacetylene, to two-dimensional quantum spin Hall effect and p-wave superconductors, three-dimensional topological insulators and superconductors or superfluids, and topological Weyl semimetals, helping them to better understand this fascinating field. To reflect research advances in topological insulators, several parts of the book have been updated for the second edition, including: Spin-Triplet Superconductors, Superconductivity in Doped Topological Insulators, Detection of Majorana Fermions and so on. In particular, the book features a new chapter on Weyl semimetals, a topic that has attracted considerable attention and has already become a new hotpot of research in the community.

Statistical Methods for Mediation, Confounding and Moderation Analysis Using R and SAS Nov 13 2021 Third-variable effect refers to the effect transmitted by third-variables that intervene in the relationship between an exposure and a response variable. Differentiating between the indirect effect of individual factors from multiple third-variables is a constant problem for modern researchers. Statistical Methods for Mediation, Confounding and Moderation Analysis Using R and SAS introduces general definitions of third-variable effects that are adaptable to all different types of response (categorical or continuous), exposure, or third-variables. Using this method, multiple third- variables of different types can be considered simultaneously, and the indirect effect carried by individual third-variables can be separated from the total effect. Readers of all disciplines familiar with introductory statistics will find this a valuable resource for analysis. Key Features: Parametric and nonparametric method in third variable analysis Multivariate and Multiple third-variable effect analysis Multilevel mediation/confounding analysis Third-variable effect analysis with high-dimensional data Moderation/Interaction effect analysis within the third-variable analysis R packages and SAS macros to implement methods proposed in the book

'Ndrangheta of Calabria: Exploring a Pragmatic Approach to Confronting Organized Crime Feb 04 2021 The persistence of 'Ndrangheta activities around the world show that deterrence efforts alone directed against organized crime fall short in significantly reducing or preventing 'Ndrangheta organized crime. Additional approaches derived from the Rational Choice Perspective (RCP) are discussed, which include Routine Activities (RA) and Situational Crime Prevention (SCP). These practical approaches are applied to 'Ndrangheta for the purpose of identifying required changes in the environment i.e., political, economic, social, technological, legal that are inclusive of environmental (PESTLE) in a framework using Dynamic Operational Design Planning and Assessment Approach (DODPAA). This approach offers a process for designing actions and measuring results for confronting 'Ndrangheta organized crime. An example framework model using cocaine transiting through the port of Gioia Tauro is created as an illustration to assist in developing a law enforcement, judicial and legislative plans of action in order to measure, evaluate, and have results integrated into more detailed comprehensive plans of action for reducing and eventually preventing overall 'Ndrangheta organized crime. This book presents a unique practical method, process, and model for security practitioners, criminologists and policy makers to consider for designing plans of action to confront, challenge, and assess future counter 'Ndrangheta efforts.

Killing and Saving Sep 18 2019 "This impressive work is fair, balanced, critical and insightful."-Choice Contrary to the views of Alasdair MacIntyre and others who assert that modern Western morality is in disarray, torn by incommensurable moral views, John Reeder believes that there is much agreement about taking and saving lives. Many people might, in fact, agree on the various circumstances in which the death of a person constitutes a violation of the right to life, or that people have a right to our help, especially a right to life-saving aid. In *Killing and Saving*, Reeder analyzes five sorts of situations in which we are morally permitted or even obligated to take human life: e.g., when we repel an attacker who voluntarily "forfeits" the right to life; when we are confronted with "involuntary pursuit" or "material aggression;" when someone "yields" the right to life; when all will die if nothing is done, but some can be saved if others are killed; and when there is a "double effect" in which we take life as a foreseen but unintended consequence of attempt to achieve a greater good. Reeder argues that these (and closely related) categories account for many of our convictions ranging from abortion to infanticide, to starvation, to war. He also examines the concept of absolute or exceptionless right to life. Reeder draws on a number of moral views, from theological ethics to Enlightenment notions of natural rights or respect for rational creatures. He does not attempt to argue for a foundation for the right not to be killed and the right to be saved. Rather, he focuses on the content of the convictions themselves and argues that where disagreements remain, such as the case of abortion, they can be accounted for by the way the rights in question are explained and justified.

Mass Effect: Retribution Sep 23 2022 Humanity has reached the stars, joining the vast galactic community of alien species. But beyond the fringes of explored space lurk the Reapers, a race of sentient starships bent on 'harvesting' the galaxy's organic species for their own dark purpose. Principles of Memory Mar 25 2020 In over 100 years of scientific research on human memory, and nearly 50 years after the so-called cognitive

revolution, we have nothing that really constitutes a widely accepted and frequently cited law of memory, and perhaps only one generally accepted principle. The purpose of this monograph is to begin to rectify this situation by proposing 7 principles of human memory that apply to all memory. These principles are qualitative statements of empirical regularities that can serve as intermediary explanations and which follow from viewing memory as a function. They apply to all types of information, to all memory systems, and to all time scales. The principles highlight important gaps in our knowledge, challenge existing organizational views of memory, and suggest important new lines of research. This volume is intended for people in the field of memory (from advanced undergraduates to seasoned researchers), although it will be of interest to those who would like a comprehensive overview of the fundamental regularities in cognitive functioning.
