The crisis threatens the welfare of about 160 million people in the Europe and Central Asia (ECA) region who are poor or are just above the poverty line. Using pre-crisis household data along with aggregate macroeconomic outturns to simulate the impact of the crisis on households transmitted via credit market shocks, price shocks, and income shocks this report finds that adverse effects are widespread and that poor and non-poor households alike are vulnerable. By 2010, for the region as a whole, some 11 million more people will likely be in poverty and over 23 million more people will find themselves just above the poverty line because of the crisis. The aggregate results mask the heterogeneity of impact within countries, including the concentration of the poverty impact in selected economic sectors. Meanwhile, stress tests on household indebtedness in selected

countries suggest that ongoing macroeconomic shocks will expand the pool of households unable to service their debt, many of them from among the ranks of relatively richer households. In fact, already there are rising household loan delinquency rates. Finally, there is evidence that the food and fuel crisis is not over and a new round of price increases, via currency adjustments, will have substantial effects on net consumers. Lessons from last year's food crisis suggest that the poor are the worst hit, as many of the poor in Albania, Kyrgyz Republic, and Tajikistan, for example, are net food consumers, with limited access to agricultural assets and inputs. The resilience of households to macroeconomic shocks ultimately depends upon the economy's institutional readiness, the flexibility of the economic policy regime, and the ability of the population to adjust. However, compared with previous crises, the scope for households to engage in their traditional coping strategies may be more limited. Fiscal policy responses in the short-term are also constrained by rapidly falling revenues.

Governments in ECA have to make difficult choices over what spending items to protect and what items to cut, social protection programs to reform and scale-up, and new interventions to mitigate the impact of the crisis. A timely answer to a growing interest in the Hindu wedding rituals, this book has narrations and explanations. Complemented by more than fifty color figures, wedding vows, interviews with inter-cultural and Hindu couples, interjected with appropriate humor, the book is a must-read for those interested in Hindu wedding customs and traditions and offers an insight to youngsters from Indian ancestry or those marrying into the Indian culture. From its inception, artificial intelligence (AI) has had a rather ambivalent relationship with humans—swinging between their augmentation and replacement. Now, as AI technologies enter our everyday lives at an ever-increasing pace, there is a greater need for AI systems to work synergistically with humans. One critical requirement for such synergistic human-AI interaction is that the AI systems' behavior be explainable to the humans in the loop. To do this effectively, AI agents need to go beyond planning with their own models of the world, and take into account the mental model of the human in the loop. At a minimum, AI agents need approximations of the human's task and goal models, as well as the human's model of the AI agent's task and goal models. The former will guide the agent to anticipate and manage the needs, desires and attention of the humans in the loop, and the latter allow it to act in ways that are

interpretable to humans (by conforming to their mental models of it), and be ready to provide customized explanations when needed. The authors draw from several years of research in their lab to discuss how an AI agent can use these mental models to either conform to human expectations or change those expectations through explanatory communication. While the focus of the book is on cooperative scenarios, it also covers how the same mental models can be used for obfuscation and deception. The book also describes several real-world application systems for collaborative decision-making that are based on the framework and techniques developed here. Although primarily driven by the authors' own research in these areas, every chapter will provide ample connections to relevant research from the wider literature. The technical topics covered in the book are self-contained and are accessible to readers with a basic background in AI. Decode a secret message, unscramble virus patterns, wind your way through a food maze, colour in safe distancing scenes, learn how to wear a mask properly, and more with *Coronavirus: An Activity Book on How to Stay Healthy and Strong!* When coronavirus hit the world in 2020, life as we knew it was turned upside down. Sudden new changes to our way of life were introduced. However, young children may not yet understand how coronavirus affects them. This activity book was created to help them to understand what is happening in the world by presenting the coronavirus and its effects in a child-friendly way. Through various fun activities, children can learn what the virus is, and how they can protect themselves against it. *Coronavirus: An Activity Book on How to Stay Healthy and Strong* features 35 activities for children. The book explores the topic of staying healthy and strong through literacy, numeracy, and arts and crafts activities. Let it spark useful conversations about the pandemic and viruses, and more importantly, how to build healthy habits and stay safe! A review of the conceptual underpinnings and operational elements of public works programs around the world., drawing from a rich evidence base and analyzing previously unassimilated data, to fill a gap in knowledge related to public works programs, now so popular. Enlightening the process of technical leadership is fundamentally about bringing greater self-awareness to our technology work. This book presents an introspective approach: Start with your talent Refine, switch and let go of your mental models Understand your sense of abundance as well as your sense of scarcity Learn from your reactions of dislike and admiration Observe how you set and form

expectations when you communicate Identify the polarities that contain contrasting perspectives Realize from what you can virtualize There are many aspects of technical leadership. Some books focus on strategy and systems. Others focus on teamwork and interpersonal skills. Still others focus on creativity and innovation. And of course, there are plenty of books devoted to the technologies themselves. This book focuses on the self-awareness that enables and transforms our capabilities in all of these areas.

Numerical solution of electromagnetic field problems arise in high frequency -- light current and low frequency -- heavy current situations. Such problems are governed by Maxwell field equations in differential and integral form and their solution is dependent upon the geometry, properties of the medium, and the boundary and initial conditions. Elliptic partial differential equations, such as the Laplace, Poisson and Helmholtz equations, are associated with steady state phenomena, i.e., boundary value problems usually modeling closed or bounded solution regions. Parabolic equations are generally associated with problems of diffusion as electromagnetic field penetration and related effects of eddy current phenomena. Hyperbolic equations arise in propagation problems, an example being the electromagnetic wave equation. The solution region is usually open so that a solution advances outwards indefinitely from initial conditions while always satisfying specified boundary conditions. Access to high speed computers and numerical methods has enabled us to solve many complex electromagnetic problems faster and at less cost. Of even greater significance is the fact that the approach enables us to undertake problems that could never have been attempted without them. Volume 2 of *Non-nominative Subjects (NNSs)* presents the most recent research on this topic from a wide range of languages from diverse language families of the world, with ample data and in-depth analysis. A significant feature of these volumes is that authors with different theoretical perspectives study the intricate questions raised by these constructions. Some of the central issues include the subject properties of noun phrases with ergative, dative, accusative and genitive case, case assignment and checking, anaphor antecedent coreference, the nature of predicates with NNSs, whether they are volitional or non-volitional, possibilities of control coreference and agreement phenomena. These analyses have significant implications for theories of

syntax and verbal semantics, first language acquisition of NNSs, convergence of case marking patterns in language contact situations, and the nature of syntactic change. The need for social safety nets has become a key component of poverty reduction strategies. Over the past three decades several developing countries have launched a variety of programs, including cash transfers, subsidies in-kind, public works, and income-generation programs. However, there is little guidance on appropriate program design, and few studies have synthesized the lessons from widely differing country experiences. This report fills that gap. It reviews the conceptual issues in the choice of programs, synthesizes cross-country experience, and analyzes how country- and region-specific constraints can explain why different approaches are successful in different countries.

Science and Technology of Rare Earth Materials reviews the important aspects of the science and technology of rare earth materials, covering the entire spectrum from occurrence to extraction and purification, phase relationships, electronic structure, and applications. This book is organized into five sections encompassing 19 chapters. The occurrence, extraction, and production of rare earths are discussed in the first section, followed by purification methods employed for rare earths, together with the role of impurities on their behavior. The phase relations among the rare earth alloys, incl ... World Bank Technical Paper No. 382. This technical paper compares and contrasts the governance and regulation of new style power pools in Australia, Canada, Norway, Sweden, and the United Kingdom. These trading markets in electricity commodities and services are explored in various ways. The authors review the basic governance models, compare decisionmakers in the industry, examine market surveillance methods used, and explore the role of government and the regulator. The paper emphasizes the lessons that can be learned from international experiences.

Young and virtuous, Nachiketa and Satyakama had one thing in common - they sought true knowledge. The song of birds, the thunder of rain clouds, and the glow of the morning sun revealed life's secrets to Satyakama. Coming face to face with the lord of death, Nachiketa found the key to immortality. The lessons the two seekers learned were priceless, for they opened to others the door to eternal bliss. Explores the similarities and differences of about forty South Asian languages from the four different language families.

Advances in Agricultural Microbiology is a

collection of papers about the progresses in the field of agricultural microbiology. The said papers are contributions of different experts in related fields. The book is divided into three sections. Section A covers topics related to the role of microorganisms in the mobilization of nutrients for plant growth such as the relationship of microbial genetics and biological nitrogen; plant surface microflora and plant nutrition; and developments in grass-bacteria associations. Section B discusses the use of microorganisms in the management of pathogens, pests, and weeds and includes topics such as the microbial control of insect pests; microbial herbicides; and agricultural antibiotics. Section C tackles strategies in bioconversion such as the production of biogas from agricultural wastes; bioconversion of lignocelluloses into protein-rich food and feed; and ethanol fuel from biomass. The text is recommended for biologists and agriculturists who would like to know more about the importance of microorganisms in the field of agriculture. Commemoration volume on G.V. Subba Rao, 1890-1975, educationist; comprises articles on his life and work. The book integrates marketing concepts with the uniqueness of the pharmaceutical marketplace in a refreshingly simple, direct and reader-friendly style. Comprehensive in its coverage and versatile in its treatment, the book assesses the Pharmaceutical Industry in the Indian context in an international perspective. The focus of the book is clearly and sharply on practice, application and hands-on experience. Providing experiential insights are the seventy one case studies discussed throughout the book showing how some companies have successfully applied the enduring, innovative marketing concepts and reaped rich dividends and some others have paid dearly for not exploiting the dormant opportunities lying at their doorsteps. An insider's view of the Reserve Bank of India Duvvuri Subbarao's term as the governor of the Reserve Bank of India from 2008 to 2013 was an unusually turbulent period. The global financial crisis erupted; India was in the throes of a decade-high, stubborn inflation rate, followed by a sharp depreciation of the rupee. This was also a time when questions about the breadth of the RBI's mandate, autonomy and accountability became subjects of debate in financial circles and in the media at large. Who Moved My Interest Rate is an authoritative account of the dilemmas and quandaries he confronted while leading the Reserve Bank through these extraordinary economic and political challenges. Case Studies carry nearly 50% marks in Ethics, Integrity and Aptitude paper of UPSC main
