In Towards a Post-Covid Global Financial System a team of experts explore how COVID-19 has affected the most vulnerable parts of the global economy; how it has been met by Islamic banking and finance; and how the principles of Islamic social finance could be used to have a fairer, more resilient Islamic finance system for all. "The Final EIS differs from the Draft because of adjustments in the baseline (or No Action Alternative) and changes to some of the assumptions and data used for the original analysis. These changes are: 1) a decrease of the projected coal production from the study region without new Federal coal leasing; 2) earlier anticipated dates for construction and mining for the proposed coal lease tracts; 3) refinement of the coal reserves and projected production from the coal lease tracts"--Page 9, volume 1. Environmental Impact Assessment (EIA) has become a vital management tool worldwide. EIA is a means of evaluating the likely consequences of a proposed major action which will significantly affect the environment, before that action is taken. This new edition of Wood's key text provides an authoritative, international review of environmental impact assessment, comparing systems used in the UK, USA, the Netherlands, Canada, the Commonwealth of Australia and New Zealand and South Africa. Key messages The land-use change caused by oil palm expansion results in adverse impacts on ecosystem functions and services provided by natural forests. This study assesses the impacts of oil palm expansion on key ecosystem services and analyzes the trade-offs among ecosystem services under four plausible future land-use scenarios in Central Kalimantan, Indonesia: business as usual, moratorium, zero gross deforestation and sustainable intensification. A trade-off between carbon benefit and habitat quality was observed in the area with low carbon stock. Providing some habitat quality in areas of oil palm expansion enhanced the carbon benefit. A synergy between carbon sequestration and water yield was evident due to oil palm expansion on Dry Rice Land with Mixed Scrub under the zero gross deforestation scenario. Among the four plausible LULC scenarios, zero gross deforestation is the most desirable option for the study area in Central Kalimantan. A successful implementation of zero gross deforestation requires a review of the forest moratorium to encompass all forest types, a clear land-use policy strategy and a detailed land-use plan involving all jurisdictions and engagement of stakeholders. Sustainable intensification is the second-best land use and land cover option for oil palm expansion with an assumed average yield enhancement to 5 tCPO ha⁻¹ yr⁻¹. However, enhancing yield in smallholder farms by 78% is highly challenging. It may be achievable

by providing appropriate and adequate technical and management supports to smallholder farms and by ensuring off-take markets for oil palm produced by smallholders. The Criminal Finances Act 2017 introduced the most radical change to tackling money laundering and corruption, recovering the proceeds of crime and counter terrorist financing, since the Proceeds of Crime Act was passed in 2002. This book will provide an excellent commentary on the changes introduced by the Act, with practical insights and an explanation of the Act's provisions. Topics included are: money laundering; unexplained wealth orders; terrorist property; tax evasion; and reasonable prevention procedures. Authored by Jonathan Fisher QC and Anita Clifford, barristers specializing in proceeds of crime and financial crime cases, this book will be of great interest and importance to all legal professionals working in the financial sector. This paper reviews empirical and theoretical work on the links between banks and their governments (the bank-sovereign nexus). How significant is this nexus? What do we know about it? To what extent is it a source of concern? What is the role of policy intervention? The paper concludes with a review of recent policy proposals. The global economy has experienced four waves of rapid debt accumulation over the past 50 years. The first three debt waves ended with financial crises in many emerging market and developing economies. During the current wave, which started in 2010, the increase in debt in these economies has already been larger, faster, and broader-based than in the previous three waves. Current low interest rates mitigate some of the risks associated with high debt. However, emerging market and developing economies are also confronted by weak growth prospects, mounting vulnerabilities, and elevated global risks. A menu of policy options is available to reduce the likelihood that the current debt wave will end in crisis and, if crises do take place, will alleviate their impact. In this new edition, author Steven J. Cann once again enlivens the topic of United States administrative law through the use of recent and "classic" legal cases to make it accessible and interesting to students. Administrative Law, Fourth Edition is an engaging casebook that presents a unique problem-solving framework that contrasts democracy with the administrative state. This novel approach places the often complex subject matter of U.S. administrative law into a more comprehensible context. The Fourth Edition has been completely updated and revised and includes many new cases to reflect changes in the law since the year 2000. Regional reports and feature articles.
