Beta Beams Oct 27 2022 The beta-beam concept for the generation of electron neutrino beams was first proposed by Piero Zucchelli in 2002. The idea created quite a stir, challenging the idea that intense neutrino beams only could be produced from the decay of pions or muons in classical neutrino beams facilities or in future neutrino factories. The concept initially struggled to make an impact but the hard work by many machine physicists, phenomenologists and theoreticians over the last five years has won the beta-beam a well-earned position as one of the frontrunners for a possible future world laboratory for high intensity neutrino oscillation physics. This is the first complete monograph on the beta-beam concept. The book describes both technical aspects and experimental aspects of the beta-beam, providing i) students and scientists with an insight into the possibilities offered by beta-beams; ii) facility designers with a starting point for future studies; and iii) policy makers with a comprehensive picture of the limits and possibilities offered by a beta-beam. Contents: Foreword writer Piero Zucchelli Machine Aspects CERN-Fréc's Potential of Other Beta Beam Settings Physics Potential of Other Beta

Beam Settings Low-Energy Beta-Beams by Cristina Volpe Readership: Academics, researchers, and research policy makers in the field of high energy physics and particle physics. Keywords: Beta Beam; Neutrino; Electron Neutrino; Electron Anti-neutrino; Neutrino Oscillation; CP Violation; Radioactive Ion Beam; High Energy Physics

Essential Readings in Light Metals, Volume 2, Aluminum Reduction Technology Jun 11 2021 ONE OF A FOUR-BOOK COLLECTION SPOTLIGHTING CLASSIC ARTICLES Landmark research findings and reviews in aluminum reduction technology Highlighting some of the

most important findings and insights reported over the past five decades, this volume features many of the best original research papers and reviews on aluminum reduction technology published from 1963 to 2011. Papers have been organized into seven themes: 1. Fundamentals 2. Modeling 3. Design 4. Operations 5. Control 6. Environmental 7. Alternative processes The first six themes deal with conventional Hall-Héroult electrolytic reduction technology, whereas the last theme features papers dedicated to nonconventional processes. Each section begins with a brief introduction and ends with a list of recommended articles for further reading, enabling researchers to explore each subject in greater depth. The papers for this volume were selected from among some 1,500 Light Metals articles. Selection was based on a rigorous review process. Among the papers, readers will find breakthroughs in science as well as papers that have had a major impact on technology. In addition, there are expert reviews summarizing our understanding of key topics at the time of publication. From basic research to advanced applications, the articles published in this volume collectively represent a complete overview of aluminum reduction technology. It will enable students, scientists, and engineers

to trace the history of aluminum reduction technology and bring themselves up to date with the current state of the technology.

Trump and His Generals May 22 2022 From one of America's preeminent national security journalists, an explosive, news-breaking account of Donald Trump's collision with the

American national security establishment, and with the world It is a simple fact that no president in American history brought less foreign policy experience to the White House than Donald J. Trump. The real estate developer from Queens promised to bring his brash, zero-sum swagger to bear to cut through America's most complex national security issues, and he did. If the cost of his "America First" agenda was bulldozing the edifice of foreign alliances that had been carefully tended by every president from Truman to Obama, then so be it. It was clear from the first that Trump's inclinations were radically more blunt force than his predecessors'. When briefed by the Pentagon on Iran and the Strait of Hormuz, he exclaimed, "The next time Iran sends its boats into the Strait: blow them out of the water! Let's get Mad Dog on this." When told that the capital of South Korea, Seoul, was so close to the North Korean border that millions of people would likely die in the first hours of any all-out war, Trump had a bold response, "They have to move." The officials in the Oval Office weren't sure if he was joking. He raised his voice. "They have to move!" Very quickly, it became clear to a number of people at the highest levels of government that their gravest mission was to protect America from Donald Trump. Trump and His Generals is Peter Bergen's riveting account of what happened when the unstoppable force of President Trump met the immovable object of America's national security establishment--the CIA, the State Department,

and, above all, the Pentagon. If there is a real "deep state" in DC, it is not the FBI so much as the national security community, with its deep-rooted culture and hierarchy. The men Trump selected for his key national security positions, Jim Mattis, John Kelly, and H. R. McMaster, were products of that culture: Trump wanted generals, and he got them. Three years later, they would be gone, and the guardrails were off. From Iraq and Afghanistan to Syria and Iran, from Russia and China to North Korea and Islamist terrorism, Trump and His Generals is a brilliant reckoning with an American ship of state navigating a roiling sea of threats without a well-functioning rudder. Lucid and gripping, it brings urgently needed clarity to issues that affect the fate of us all. But clarity, unfortunately, is not the same thing as reassurance.

Essential Readings in Light Metals, Aluminum Reduction Technology Sep 02 2020 ONE OF A FOUR-BOOK COLLECTION SPOTLIGHTING CLASSIC ARTICLES Landmark research findings and reviews in aluminum reductiontechnology Highlighting some of the most important findings and insightsreported over the past five decades, this volume features many ofthe best original research papers and reviews on aluminum reductiontechnology published from 1963 to 2011. Painting Peace Jan 18 2022 A revered modern artist and Zen teacher offers an inspirational account of how his art has been the expression

of a life of social activism. "Awakening," says Kazuaki Tanahashi, "is to realize the infinite value of each moment of your own life as well as of other beings, then to continue to act accordingly." This book is the record of a life spent acting accordingly: Through his prose, poetry, letters, lyrics, and art, Tanahashi provides an inspirational account of a what it's been like to work for peace and justice, from his childhood in Japan to the present day. Included are fascinating vignettes of the seminal figures who refined his views--among them Daniel Ellsberg, Gary Snyder, Mayumi Oda, and Morihei Ueshiba, the founder of Aikido--as well as striking examples of the art he has so famously used to bear witness to the infinite value of life.

Enabling Collaborative Governance through Systems Modeling Methods Sep 26 2022 This volume constitutes a first approximation for the use of systems approaches and dynamic performance management as tools for collaborative governance. The chapters examine models and simulations used in some specific systems approaches, which contribute to facilitating problem focus and collective understanding of collaborative governance, especially in the area of performance management. The explicit connection between resources and outcomes promoted by this view helps managers to understand better how to improve policy and to create positive outcomes that create public value.

Greenhouse Gas Control Technologies - 6th International Conference Oct 03 2020 Climate change is an issue that is highly debated around the globe. This book brings together the papers that were presented at a conference dedicated to this issue, held in Kyoto in October 2002. Covering a broad range of areas, the topics presented will benefit both those working in the field of carbon dioxide recovery and sequestration, and those looking at the

effects of non carbon dioxide greenhouse gases. An overview of the Research and Design technologies which aid in mitigating climate change is included, which will be invaluable to those researching new opportunities for dealing

with this problem. An area of research that has seen a rapid rise in worldwide spend Will benefit both researchers in climate change, and those looking at new technologies to help deal

with the problem Presents papers from contributors spread around the globe means that this book has world wide relevance
