determined probability simply convert the resulting number by 100 for example in the example for calculating the probability of rolling a 6 on two dice $p(a \text{ and } b) = \frac{1}{6} \times \frac{1}{6} = \frac{1}{36}$ take $\frac{1}{36}$ to get the decimal and multiple by 100 to get the percentage $\frac{1}{36} \times 100 = 2.78\%$ web the probability of any event depends upon the number of favorable outcomes and the total outcomes in general the probability is the ratio of the number of favorable outcomes to the total outcomes in that sample space it is expressed as probability of an event $p = \frac{\text{number of favorable outcomes}}{\text{sample space}}$
